

SURGITRACK®

TRANSFORM YOUR PERIOPERATIVE SUPPLY CHAIN

ARE YOU FEELING THE PRESSURE?

These are challenging times for OR supply chain managers. Cases loads are uncertain and demand is in flux, making forecasting volumes and how much supply to carry harder than ever. In situations like this, there is a natural tendency to take the safe approach and stock up on inventory. But that approach inevitably leads to higher inventories, higher costs, more waste, and ultimately less efficiency. That's where Owens & Minor's SurgiTrack can help.

TAKE THE STRESS OUT OF INVENTORY MANAGEMENT

SurgiTrack is a comprehensive clinical supply delivery service that delivers ready-to-use custom surgery packs right to your facility based on procedure and physician preference. We provide the supplies and the staff to pick those supplies so you don't have to, enabling you to focus your time, effort and attention on patient care.

TURN DATA INTO INFORMATION

The real power of SurgiTrack is our ability to take your data and turn it into information you can act on. We take a deep dive into your physician preference cards and utilization data and using sophisticated methodologies and advanced analytics we identify ways to improve your efficiencies and lower your costs.

UP AND RUNNING IN 60 DAYS

SurgiTrack features a 60-day implementation where we identify complex procedures with expected increase, consolidate like items by surgeon/procedure, and build procedure-specific kits. The process is completely flexible based on your needs. We can provide you generic kits if that is the best way to handle the surge in volume or we can provide surgeon-specific kits.

EASY RETURNS

SurgiTrack's return policy is simple. Any unopened and unused items can be returned for a refund, no questions asked. Then we'll use your returns data to help build you a better kit.

FEATURES

2-week inventory level of completed kits

2-week component inventory in supply chain

Return and credit of any unopened/unused supplies

Advanced reporting

SURGITRACK AT-A-GLANCE

- Staff spends less time on supply chain activities
- Reduction in case picking time
