

Because Disinfecting is the Highest Standard of Clean

Pacific Blue Select™
Surface System
Bucket and Wipes

PERFORMANCE
AT WORK™

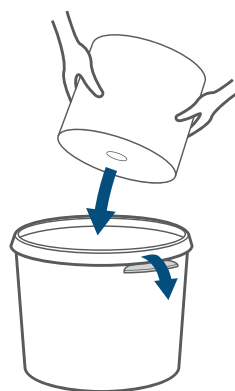

Cleaning vs Disinfecting

Because bacteria tend to hide in plain sight, surfaces need to be more than clean.

Help prevent illness by properly sanitizing and disinfecting contact surfaces and common touch-points throughout your facility.

Disinfecting Made Simple

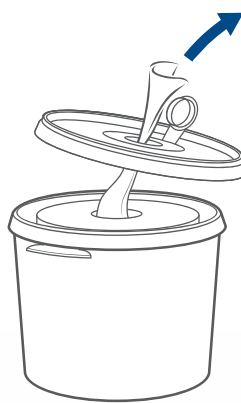

With our Pacific Blue Select™ Surface System you can create a custom hard surface wet wipe using your own sanitizer or disinfectant. It's simple:

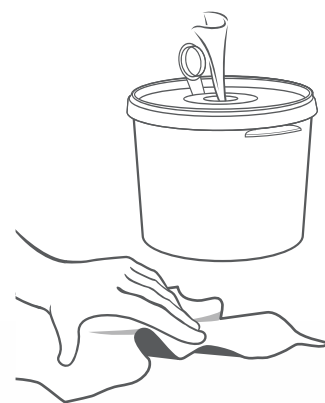

1. Insert roll

2. Add disinfectant

3. Thread wipe

4. Disinfect

Pacific Blue Select™ Surface System Wipes can be used with disinfectants containing¹:

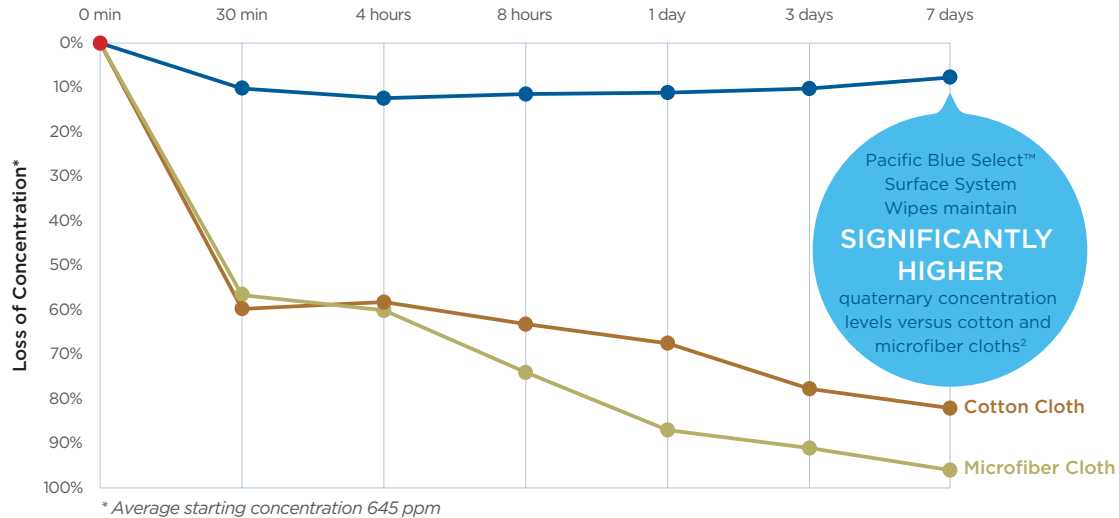

Quaternary Ammonium Compounds (Quat), Peroxide, Peroxide with Peracetic Acid, Isopropyl Alcohol (70% Solution), Bleach, Phenolic

For more information regarding quat loss of disinfectants and sanitizers used with Pacific Blue Select™ Surface System visit gppro.com/surfacesystem

Disinfecting is More Than Clean

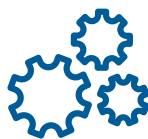

Dwell time, surface saturation, and even a cloth's material can mean the difference between disinfecting and merely cleaning. Many dental offices rely on microfiber or cotton cloths for both cleaning and disinfecting. Although these cloths clean well, they may not be best for disinfecting hard surfaces.

Quat loss from solution over time: Pacific Blue Select™ Surface System Wipes vs. cloth

SANITARY

One-at-a-time pop-up dispensing delivers a clean sheet every time and protects unused sheets from contamination.

EFFECTIVE

Consistently retains higher disinfectant levels compared to cotton towels and microfiber cloths³.

VERSATILE

Compatible with a wide range of sanitizers and disinfectants⁴.

EFFICIENT

Re-sealable slotted opening dispenses wipes one-at-a-time to help reduce waste and control cost.

SAFE

Tight-fitting lid that virtually eliminates the risk of spills, splashes, errant sprays, and vapors that are associated with open buckets and/or spray bottles.

Multi-layer wipe balances hand feel with strength, absorbency and liquid delivery to the surface for more confident cleaning & disinfecting.

Wipes will not break down when used with common disinfectants and/or solvents⁵.

Great for restaurants, cafeterias, grocery, convenience stores, hospitals, health care facilities, schools & more.

1 When used with an EPA registered disinfectant, the EPA master label must contain directions for applying with a cloth; please follow directions for use.

2 Quat sanitizer loss as a function of time for Pacific Blue Select™ Surface System, cotton bar mops and microfiber cloths.

3 Tested with a variety of Quaternary Ammonium Compounds (Quat) based disinfectants and generic terry cloth and microfiber towels.

4 Pacific Blue Select™ Surface System Wipes can be used with disinfectants containing Quaternary Ammonium Compounds (Quat), Peroxide, Peroxide with Peracetic Acid, Bleach, Phenolic, Isopropyl Alcohol (70% Solution) (Note: When used with an EPA registered disinfectant, the EPA master label must contain directions for applying with a cloth; please follow directions for use.)

5 Tested with Isopropyl alcohol (70% Solution), acetone, bleach, peroxide, peroxide with peracetic acid, and Quaternary Ammonium Compounds (Quat).

Germs tend to hide in plain sight.
