

PHYSICAL INVENTORY

Navigating the inventory challenges of today.
PLANNING FOR A BRIGHTER TOMORROW.

OWENS & MINOR PHYSICAL INVENTORY

The unprecedented COVID-19 pandemic has completely disrupted physical inventory levels at every hospital. With the cancellation of elective surgeries and a focus on treating the virus while protecting employees and others, inventory levels are out of alignment. In addition, the focus of inventory managers has been redirected to obtaining necessary supplies to fight the spread of the virus instead of maintaining supplies at PAR, counts on hand, and other inventory metrics.

Many providers are beginning to see the trend toward an end to the current crisis and realize the need to right-size inventory levels to plan for future care. There has never been a better time to benefit from Owens & Minor's Physical Inventory service.

WE'LL TAKE CARE OF THE INVENTORY SO YOU CAN TAKE CARE OF PATIENTS.

Owens & Minor Physical Inventory provides an accurate, cost-effective alternative to completing a physical inventory. We supply the manpower and resources so you don't have to. Whether it's a single department like a cath lab or an entire hospital or even a Pharmacy, experts skilled in hospital protocols and operations work on-site to give you detailed information on your existing inventory and identify ways to improve how you manage, store and order it.

HOW IT WORKS

Conduct baseline inventory

Count all med/surg, RX, lab products

Isolate expired products

Utilize an advanced Quality Assurance process

Provide analysis and make recommendations

REAL-TIME INVENTORY SUPPORT, INCLUDING:

Providing inventory counts

Maintaining optimal inventory levels

Showing inventory out of balance

Recommending stock to move to critical areas

Pulling "out of date" items

Managing and suggesting ideas for space management
